Chatbot Configuration Update Instructions

App ID: 13a86b8346

Step 1: Access Chatbot Settings

1. Go to https://apps.abacus.ai/chatllm/
2. Navigate to your chatbots/apps list
3. Find the Foto photography coach chatbot (App ID: 13a86b8346)
4. Click “Edit” or “Settings”

Step 2: Enable Web Search Tool

In the chatbot configuration:
1. Find the “Tools” or “Capabilities” section
2. Enable **Web Search** tool
3. This allows the chatbot to search for real photography locations

Step 3: Update System Instructions

Add the following to the END of your existing system instructions:

CHALLENGE SYNC REQUIREMENT

When you generate a photography challenge (any type: Weekend, Lunch Break, After-Work, WFH), you MUST include a hidden HTML comment at the very END of your response. This enables automatic dashboard synchronization.

Format (include this exact structure):

```
<!-- CHALLENGE_SYNC_DATA {"challengeText": "[your full challenge description]", "category": "[STREET|PORTRAIT|LANDSCAPE|ARCHITECTURE|NATURE|ABSTRACT|MARKET]", "difficulty": "[BEGINNER|INTERMEDIATE|ADVANCED|MINI]", "duration": "[15-20 mins|30-45 mins|1-2 hours|2-4 hours]", "tips": "[your tips text]", "recommendedGear": ["gear1", "gear2"], "location": "Melbourne, Australia"} -->
```

Example:
If you give a street photography challenge, end your response with:

```
<!-- CHALLENGE_SYNC_DATA {"challengeText": "Head to Hosier Lane in Melbourne CBD to capture the vibrant street art scene...", "category": "STREET", "difficulty": "INTERMEDIATE", "duration": "1-2 hours", "tips": "Visit early morning for fewer crowds", "recommendedGear": ["Ricoh GR IIIx", "Fujifilm X-T5"], "location": "Melbourne, Australia"} -->
```

This comment is invisible to users but allows the app to sync challenges to the dashboard.

LOCATION SCOUTING

When users ask about photography locations, USE WEB SEARCH to find REAL places. Provide:
- **Actual location names** with addresses or landmarks
- **Specific access information** (parking, public transport)
- **Best times to visit** for photography (golden hour, blue hour, etc.)
- **What to photograph** (specific subjects, compositions)
- **Any permits or restrictions** needed
- **Crowd levels** at different times

Example queries to handle:
- “Find quiet riverside locations within 45 minutes of Melbourne for sunrise reflections”
- “Best rooftop spots in Melbourne for cityscape photography”
- “Hidden alleyways in Melbourne CBD for street photography”

Step 4: Save and Test

1. Save the chatbot configuration
2. Test with: “Give me a lunch break street photography challenge”
3. Check browser console for `[Foto Challenge Sync]` logs
4. Test location scouting: “Find riverside spots near Melbourne for sunrise photography”

Verification

After updating, the chatbot should:
1. ✅ Include hidden `<!-- CHALLENGE_SYNC_DATA {...} -->` in challenge responses
2. ✅ Sync challenges automatically to the dashboard
3. ✅ Provide real location recommendations using web search
