🔗 Webhook Integration Guide for Foto Challenge Sync

Overview

This guide shows how to integrate your Foto chatbot with the challenge sync API using Abacus.AI webhooks. This enables **automatic, invisible challenge syncing** without any visible JSON or manual intervention.

🎯 Architecture

```
 User asks for challenge
          ↓
Chatbot generates challenge
          ↓
Chatbot calls webhook → https://myfoto.topues.com/api/challenges/sync
          ↓
Challenge saved to database
          ↓
Dashboard auto-updates
          ↓
User sees challenge (no JSON visible!)
```

📋 Prerequisites

1. ✅ Your Foto app is deployed at: `https://myfoto.topues.com`
2. ✅ API endpoint exists: `/api/challenges/sync`
3. ✅ You have access to Abacus.AI chatbot settings

🛠️ Setup Instructions

Step 1: Access Chatbot Settings

1. Go to your chatbot on Abacus.AI
2. Click on **"Deployment"** or **"Settings"**
3. Look for **"Webhooks"** or **"Add New Webhook"** button

Step 2: Configure Webhook

Webhook Configuration:

Field	Value
Name	Foto Challenge Sync
URL	`https://myfoto.topues.com/api/challenges/sync`
Method	`POST`
Content-Type	`application/json`
Event Type	`On Assistant Response` (or `After Message`)

Step 3: Configure Payload Template

Option A: If webhook supports custom payload template:

```
{
  "userId": "1",
  "challengeText": "{{challenge_title}}",
  "category": "{{category}}",
  "difficulty": "{{difficulty}}",
  "duration": "{{duration}}",
  "location": "{{location}}",
  "recommendedGear": "{{gear}}",
  "tips": "{{tips}}",
```

```
  "weatherConditions": "{{weather}}"
}
```

Option B: If using default payload:

The chatbot will need to format the JSON in its response, which the webhook will forward.

Step 4: Update Chatbot Instructions

Replace the current CHALLENGE_SYNC_DATA instructions with:

🤖 Chatbot System Prompt (Webhook Version)

When a user requests a photography challenge, follow this format:

Natural Language Response (What Users See)

```
🎯 **[Challenge Name]**

[2-3 sentences describing the challenge]

📍 **Location:** [Specific location or "Flexible"]
⏱️ **Duration:** [e.g., "30 minutes"]
📸 **Recommended Gear:** [Specific gear from Seun's collection]
🌤️ **Weather:** [Weather conditions]

💡 **Shooting Tips:**
- [Tip 1]
- [Tip 2]
- [Tip 3]

**Creative Twist:** [Unique element]

**Reflection Prompt:** [Question for evaluation]
```

```
✅ **Challenge saved to your dashboard!**
```

Webhook Trigger

After generating the challenge description, call the webhook with this JSON:

```
{
  "userId": "1",
  "challengeText": "[Challenge title exactly as shown above]",
  "category": "STREET",
  "difficulty": "MINI",
  "duration": "30 minutes",
  "location": "[Location from description]",
  "recommendedGear": "[Gear from description]",
  "tips": "[Brief summary of tips]",
  "weatherConditions": "[Weather from description]"
}
```

IMPORTANT RULES: 1. **NO VISIBLE JSON** in the chat response 2. **Call webhook immediately** after generating description 3. **Match data** between description and webhook payload 4. **Use valid values** for category and difficulty

Valid Values

Categories (pick ONE): - PORTRAIT - LANDSCAPE - STREET - MARKET - ARCHITECTURE - NATURE - ABSTRACT

Difficulty (pick ONE): - BEGINNER (simple, 30 min - 1 hour) - INTERMEDIATE (moderate, 1-2 hours) - ADVANCED (challenging, 2+ hours) - MINI (quick, 15-30 minutes)

✅ Complete Example

User asks: "Give me a street photography challenge"

Chatbot response (visible):

```
🎯 **Urban Geometry: Lines & Shapes in the City**

Today's challenge is all about discovering the hidden patterns and bold

📍 **Location:** Flexible (any urban area)
⏱️ **Duration:** 30 minutes
📸 **Recommended Gear:** Fujifilm X-T5 with 23mm f/2 lens
🌤️ **Weather:** Any

💡 **Shooting Tips:**
- Look for leading lines that guide the viewer's eye
- Use a low or high angle to exaggerate shapes
- Pay attention to light and shadow for contrast

**Creative Twist:** Shoot only in black and white mode to focus purely

**Reflection Prompt:** Which image surprised you most, and how did focu

✅ **Challenge saved to your dashboard!**
```

Webhook payload (sent automatically, NOT visible to user):

```
{
  "userId": "1",
  "challengeText": "Urban Geometry: Lines & Shapes in the City",
  "category": "STREET",
  "difficulty": "MINI",
  "duration": "30 minutes",
  "location": "Flexible",
  "recommendedGear": "Fujifilm X-T5 with 23mm f/2 lens",
  "tips": "Look for leading lines, use low or high angles, pay attentio
  "weatherConditions": "Any"
}
```

Result: - ✅ User sees clean, inspiring challenge description - ✅ NO JSON clutter in the chat - ✅ Challenge automatically appears on dashboard - ✅ Seamless user experience!

🧪 Testing the Integration

Test 1: Webhook Configuration

1. After configuring the webhook, use the **"Test Webhook"** button (if available)
2. Check the response status code: **200 OK** means success

Test 2: API Direct Test

Test the API endpoint directly:

```
curl -X POST https://myfoto.topues.com/api/challenges/sync \
  -H "Content-Type: application/json" \
  -d '{
    "userId": "1",
    "challengeText": "Test Challenge",
    "category": "STREET",
    "difficulty": "MINI",
    "duration": "30 minutes",
    "location": "Flexible",
    "recommendedGear": "Fujifilm X-T5 with 23mm f/2 lens",
    "tips": "Test tips",
    "weatherConditions": "Any"
  }'
```

Expected response:

```
{
  "success": true,
  "challenge": {
    "id": "...",
    "challengeText": "Test Challenge",
```

```
    "category": "STREET",
    ...
  },
  "created": true
}
```

Test 3: End-to-End Test

1. Go to: **https://myfoto.topues.com/chat**
2. Ask: **"Give me a street photography challenge"**
3. **Expected results:**
4. ✅ Clean challenge description appears
5. ✅ NO JSON visible
6. ✅ "Challenge saved to your dashboard!" message
7. Go to: **https://myfoto.topues.com/dashboard**
8. Wait 10 seconds (auto-refresh)
9. **Expected result:**
10. ✅ Challenge appears in "Current Challenge" tab

🔍 Troubleshooting

Issue: Webhook not triggering

Possible causes: - Webhook URL incorrect - Event type not configured properly - Chatbot not calling webhook

Solutions: 1. Check webhook configuration in Abacus.AI settings 2. Verify webhook URL: `https://myfoto.topues.com/api/challenges/sync` 3. Check webhook logs in Abacus.AI dashboard

Issue: Challenge not appearing on dashboard

Possible causes: - API call failed - Invalid data format - Database error

Solutions: 1. Check API response in webhook logs 2. Verify JSON payload matches expected format 3. Test API endpoint directly (see Test 2 above)

Issue: Webhook returns error

Common errors:

Status Code	Meaning	Solution
400	Missing required fields	Check payload includes `userId` and `challengeText`
404	Endpoint not found	Verify webhook URL is correct
500	Server error	Check server logs for details

📊 API Endpoint Reference

POST /api/challenges/sync

Description: Creates or updates a challenge in the database.

Request Headers:

```
Content-Type: application/json
```

Request Body:

```
{
  "userId": "string (required)",
  "challengeText": "string (required)",
  "category": "string (optional)",
  "difficulty": "string (optional)",
  "duration": "string (optional)",
  "location": "string (optional)",
  "recommendedGear": "string (optional)",
```

```
  "tips": "string (optional)",
  "weatherConditions": "string (optional)"
}
```

Response (Success):

```
{
  "success": true,
  "challenge": {
    "id": "string",
    "userId": "string",
    "challengeText": "string",
    "category": "string",
    "difficulty": "string",
    ...
  },
  "created": true  // or "updated": true if existing challenge was upda
}
```

Response (Error):

```
{
  "error": "string",
  "details": "string (optional)"
}
```

🎯 Advantages of Webhook Integration

✅ **No visible JSON** - Users never see any technical data
✅ **Automatic sync** - No manual intervention required
✅ **Reliable** - Direct API call from server to server
✅ **Real-time** - Challenge appears immediately on dashboard
✅ **Clean UX** - Professional, seamless user experience
✅ **No iframe limitations** - Bypasses cross-origin restrictions
✅ **Future-proof** - Easy to extend with additional features

📚 Alternative: Custom Tool (If Webhook Not Available)

If webhook integration is not available in your chatbot plan, you can use a **Custom Tool** instead:

Custom Tool Configuration

Tool Name: `save_challenge_to_dashboard`

Tool Description: "Saves a photography challenge to the user's dashboard"

Parameters:

```
{
  "type": "object",
  "properties": {
    "challengeText": {"type": "string", "description": "Title of the ch
    "category": {"type": "string", "enum": ["PORTRAIT", "LANDSCAPE", "S
    "difficulty": {"type": "string", "enum": ["BEGINNER", "INTERMEDIATE
    "duration": {"type": "string", "description": "Duration (e.g., '30
    "location": {"type": "string", "description": "Location for the cha
    "recommendedGear": {"type": "string", "description": "Recommended g
    "tips": {"type": "string", "description": "Photography tips"},
    "weatherConditions": {"type": "string", "description": "Weather con
  },
  "required": ["challengeText"]
}
```

Tool Implementation:

```
 import requests

def save_challenge_to_dashboard(challengeText, category="STREET", diffi
                                duration="30 minutes", location="Flexi
                                recommendedGear="", tips="", weatherCo
```

```
    url = "https://myfoto.topues.com/api/challenges/sync"
    payload = {
        "userId": "1",
        "challengeText": challengeText,
        "category": category,
        "difficulty": difficulty,
        "duration": duration,
        "location": location,
        "recommendedGear": recommendedGear,
        "tips": tips,
        "weatherConditions": weatherConditions
    }

    response = requests.post(url, json=payload, headers={"Content-Type"
    return response.json()
```

🚀 Next Steps

1. **Configure webhook** in Abacus.AI chatbot settings
2. **Update chatbot instructions** to use webhook format
3. **Test** the integration end-to-end
4. **Verify** challenge appears on dashboard
5. **Celebrate!** 🎉 You now have seamless challenge sync!

📞 Support

If you encounter any issues:

1. Check webhook logs in Abacus.AI dashboard
2. Test API endpoint directly with curl
3. Check browser console on chat page for errors
4. Verify chatbot instructions are correct

Status: Production-ready webhook integration ✅
