🚀 Setup Automatic Challenge Sync (No User Action Required!)

📋 Quick Start

We're going to configure your Abacus.AI chatbot to automatically call your API when it generates a challenge. This means:

✅ **No visible JSON** - Users never see technical data
✅ **No buttons to click** - Fully automatic
✅ **No copy/paste** - Zero user action
✅ **Professional UX** - Seamless experience

🔧 Step 1: Find Your Chatbot Settings

1. Go to: **https://apps.abacus.ai/chatllm/admin/projects**
2. Find your "Foto" chatbot
3. Look for one of these sections:
   - **"Custom Tools"** (preferred)
   - **"Webhooks"** (alternative)
   - **"API Integrations"** (alternative)
   - **"Actions"** (alternative)

📸 Screenshot Request

Please take a screenshot showing:
- The chatbot settings page
- Any sections related to "Tools", "Webhooks", "Actions", or "Integrations"

This will help me give you exact instructions for your specific setup.

💡 What We're Going to Do

Option A: Custom Tool (Preferred)

If your chatbot supports **Custom Tools**, we'll create a tool called `sync_challenge_to_dashboard` that the chatbot can call automatically.

How it works:

```
User: "Give me a street photography challenge"
   ↓
Chatbot: Generates challenge description
   ↓
Chatbot: Automatically calls sync_challenge_to_dashboard() tool
   ↓
API: Saves challenge to database
   ↓
Dashboard: Shows new challenge (auto-refreshes every 10s)
   ↓
User: Sees clean challenge description + confirmation message
```

No JSON visible. No buttons. No user action. Perfect!

Option B: Webhook

If your chatbot supports **Webhooks**, we'll configure it to POST to your API endpoint after generating a response.

Configuration:
- **Webhook URL:** `https://myfoto.topues.com/api/challenges/sync`
- **Method:** POST
- **Trigger:** After generating challenge response

Option C: Direct API Call in Prompt

If neither tools nor webhooks are available, we can configure the chatbot to make HTTP requests directly using its built-in capabilities.

🎯 Next Steps

Please check your chatbot settings and let me know which option you have:

1. ✅ Custom Tools
2. ✅ Webhooks
3. ✅ API Integrations
4. ❌ None of the above (we'll use a different approach)

Once I know what's available, I'll give you exact step-by-step instructions!

📊 What You'll Get

After setup, your workflow will be:

User: "Give me a challenge"
Chatbot: [Beautiful challenge description]
✅ **Challenge automatically appears on dashboard**
User: Goes to dashboard and sees the challenge

That's it! No JSON, no buttons, no manual steps.
