🔧 Dashboard Troubleshooting Guide

Current Status

✅ **Database**: Connected and seeded with user data
✅ **API**: Challenge generation working (`/api/challenges`)
✅ **Build**: Next.js compiles successfully
⚠️ **Dashboard**: Some buttons reported as not working

Quick Diagnostic Steps

1. Test Challenge Generation API

```
cd ~/foto_app/nextjs_space

# Test API directly
curl -X POST http://localhost:3000/api/challenges \
  -H "Content-Type: application/json" \
  -d '{"userId": "1", "challengeType": "LUNCH_MICRO", "forceGenerate": true}' | jq .
```

Expected: Should return a challenge object with `challengeText` , `tips` , `recommendedGear` , etc.

---

2. Check Database for User

```
cd ~/foto_app/nextjs_space
node check_user.js
```

Expected Output:

```
✅ Users found: 7

- ID: 1
  Email: seun@example.com
  Name: Seun
  Preferences: YES
  Gear: 4 items
```

---

3. Test Dashboard in Browser

1. Open your deployed URL: **https://myfoto.topues.com/dashboard**
2. Open browser DevTools (F12)
3. Go to **Console** tab
4. Click “Generate New Challenge” button

5. Check for errors in console

Common Errors:

❌ “User ID required”

Fix: Dashboard is using hardcoded `userId: '1'`. Make sure this user exists (run step 2).

❌ “Failed to generate challenge”

Fix: Check API logs for specific error. Could be:
- LLM API key invalid
- Weather API failing
- Database connection issue

❌ “Network error” / “Failed to fetch”

Fix: API route not responding. Check if Next.js dev server is running.

---

4. Check Environment Variables

```
cd ~/foto_app/nextjs_space
cat .env
```

Required Variables:
- ✅ `DATABASE_URL` - PostgreSQL connection string
- ✅ `ABACUSAI_API_KEY` - For LLM challenge generation
- ✅ `OPENWEATHERMAP_API_KEY` - For weather integration
- ✅ `SENDGRID_API_KEY` - For email notifications (optional)
- ✅ `NEXTAUTH_SECRET` - For authentication

---

5. Check Server Logs

If using development server:

```
cd ~/foto_app/nextjs_space
yarn dev
# Watch console for errors
```

If deployed:
- Check deployment logs on your hosting platform
- Look for API route errors
- Check database connection errors

Common Issues & Solutions

Issue 1: “Generate New Challenge” Button Does Nothing

Symptoms:
- Button clicks but nothing happens

- No error messages
- No new challenge appears

Debug:

```
// Open browser console on dashboard
// Try running this directly:
fetch('/api/challenges', {
  method: 'POST',
  headers: { 'Content-Type': 'application/json' },
  body: JSON.stringify({
    userId: '1',
    challengeType: 'WEEKEND_DEEP_DIVE',
    forceGenerate: true
  })
})
.then(r => r.json())
.then(console.log)
.catch(console.error);
```

Possible Causes:
1. ❌ API key missing/invalid → Check `.env` file
2. ❌ Database not seeded → Run `node check_user.js`
3. ❌ Network issue → Check browser network tab
4. ❌ CORS issue → Check if deployed URL matches `NEXTAUTH_URL`

Issue 2: Tab Buttons Don't Switch Content

Symptoms:
- Clicking "History" or "Itinerary" tabs doesn't change view
- Tabs look inactive

Solution:
This is normal! The tabs are **navigation tabs**, not action buttons. They should work correctly in the browser.

The test tool may report them as "inactive buttons" because they're tab triggers (role="tab"), not action buttons.

Test in Browser:
1. Open https://myfoto.topues.com/dashboard
2. Click "History" tab → Should show past challenges
3. Click "Itinerary" tab → Should show "Coming soon" message

Issue 3: Challenge Generation Fails with Error

Symptoms:
- Error toast appears
- Console shows "Failed to generate challenge"

Debug Steps:

Step 1: Check LLM API

```
# Test Abacus.AI API directly
curl -X POST https://apps.abacus.ai/v1/chat/completions \
  -H "Content-Type: application/json" \
  -H "Authorization: Bearer YOUR_ABACUSAI_API_KEY" \
  -d '{
    "model": "gpt-4.1-mini",
    "messages": [{"role": "user", "content": "Say hello"}],
    "max_tokens": 50
  }'
```

Expected: Should return a chat completion response.

Step 2: Check Weather API

```
# Test OpenWeatherMap API
curl "http://api.openweathermap.org/data/2.5/weather?
q=San%20Francisco&appid=YOUR_OPENWEATHERMAP_API_KEY&units=imperial"
```

Expected: Should return weather data for San Francisco.

Step 3: Check Database Connection

```
cd ~/foto_app/nextjs_space
yarn prisma db push
```

Expected: “The database is already in sync with the Prisma schema.”

Issue 4: “Error: undefined” on Button Click

Cause: The error response format doesn’t match what the frontend expects.

Check API Response Format:

```
curl -X POST http://localhost:3000/api/challenges \
  -H "Content-Type: application/json" \
  -d '{"userId": "1", "challengeType": "LUNCH_MICRO", "forceGenerate": true}' \
  | jq .
```

Expected Format:

```
{
  "challenge": {
    "id": "...",
    "challengeText": "...",
    "difficulty": "...",
    "category": "...",
    "duration": "...",
    "tips": "...",
    "recommendedGear": [...]
  },
  "message": "Challenge generated successfully"
}
```

If Error:

```
{
  "error": "Specific error message here"
}
```

Fix: Update error handling in `app/dashboard/page.tsx`:

```
if (response.ok) {
  setCurrentChallenge(data.challenge);
  toast.success('New challenge generated!');
} else {
  // Handle both .error and .message fields
  toast.error(data.error || data.message || 'Failed to generate challenge');
}
```

Testing Checklist

Run through this checklist to verify everything works:

✅ Backend Tests

- [ ] Database connected: `node check_user.js` shows user
- [ ] Prisma client generated: `yarn prisma generate` succeeds
- [ ] Schema in sync: `yarn prisma db push` confirms sync
- [ ] API responds: `curl http://localhost:3000/api/health` returns 200

✅ API Tests

- [ ] Challenge generation works: POST to `/api/challenges` returns challenge
- [ ] Progress endpoint works: GET `/api/progress?userId=1` returns progress
- [ ] Challenges list works: GET `/api/challenges?userId=1` returns challenges

✅ Frontend Tests

- [ ] Dashboard loads: Visit https://myfoto.topues.com/dashboard
- [ ] No console errors: Check browser DevTools console
- [ ] Tabs work: Click “History” and “Itinerary” tabs
- [ ] Generate button works: Click “Generate New Challenge”

- [ ] Toast notifications appear: Success/error messages display

---

Deployment Checklist

If deploying to production:

1. Update Environment Variables

```
# On your deployment platform, set:
DATABASE_URL=postgresql://...
NEXTAUTH_URL=https://myfoto.topues.com
NEXTAUTH_SECRET=...
ABACUSAI_API_KEY=...
OPENWEATHERMAP_API_KEY=...
SENDGRID_API_KEY=...
```

2. Run Migrations

```
yarn prisma migrate deploy
# or
yarn prisma db push
```

3. Seed Database

```
yarn prisma db seed
# or run custom seed script
```

4. Test Deployment

```
# Test health endpoint
curl https://myfoto.topues.com/api/health

# Test challenge generation
curl -X POST https://myfoto.topues.com/api/challenges \
  -H "Content-Type: application/json" \
  -d '{"userId": "1", "challengeType": "LUNCH_MICRO", "forceGenerate": true}'
```

Emergency Debug Commands

View All Environment Variables

```
cd ~/foto_app/nextjs_space && cat .env
```

Check Database Contents

```
cd ~/foto_app/nextjs_space && node check_user.js
```

Rebuild Everything

```
cd ~/foto_app/nextjs_space
yarn install
yarn prisma generate
yarn prisma db push
yarn build
```

Start Fresh Dev Server

```
cd ~/foto_app/nextjs_space
pkill node  # Kill existing servers
yarn dev
```

Getting Help

If issues persist, provide these details:

1. **Exact error message** (from browser console)
2. **API response** (from curl test)
3. **Environment** (development/production)
4. **Database status** (output of `node check_user.js`)
5. **Server logs** (console output when clicking button)

Summary

Your Foto App has two main components:

1. **Next.js Web App** (`/home/ubuntu/foto_app/nextjs_space`)
   - Running at: https://myfoto.topues.com
   - Has dashboard with challenge generation
   - Uses its own Prisma database

2. **FastAPI Backend** (`/home/ubuntu/foto_ai_agent`)
   - Running at: https://fotoai.topues.com
   - Separate API service
   - Different database

Current Status:
- ✅ API endpoint works (tested with curl)
- ✅ Database has user data
- ✅ Challenge generation succeeds
- ⚠️ Need to verify in actual browser

Next Step: Open https://myfoto.topues.com/dashboard in browser and try generating a challenge!
